Subject: 1992

*discussed in Aff.  
who had no problem.  
He thought this  
had been used before.*

Pursuant to Lee Pollak's request, the following is my suggested revision to paragraph 2:

iii) This proposal is without substantive scientific foundation. No constituent as found in cigarette smoke has been shown to cause cancer or any other human disease. Indeed, the U.S. Surgeon General has concluded that it is not possible to state that lower tar and nicotine cigarettes are safer. Furthermore, the proposal could result in changes in consumers' smoking practices. For example, smokers of so-called "higher tar cigarettes" may switch to hand-rolling their own cigarettes.

If you have questions, please don't hesitate to contact me.

Regards,  
Steve Parrish
